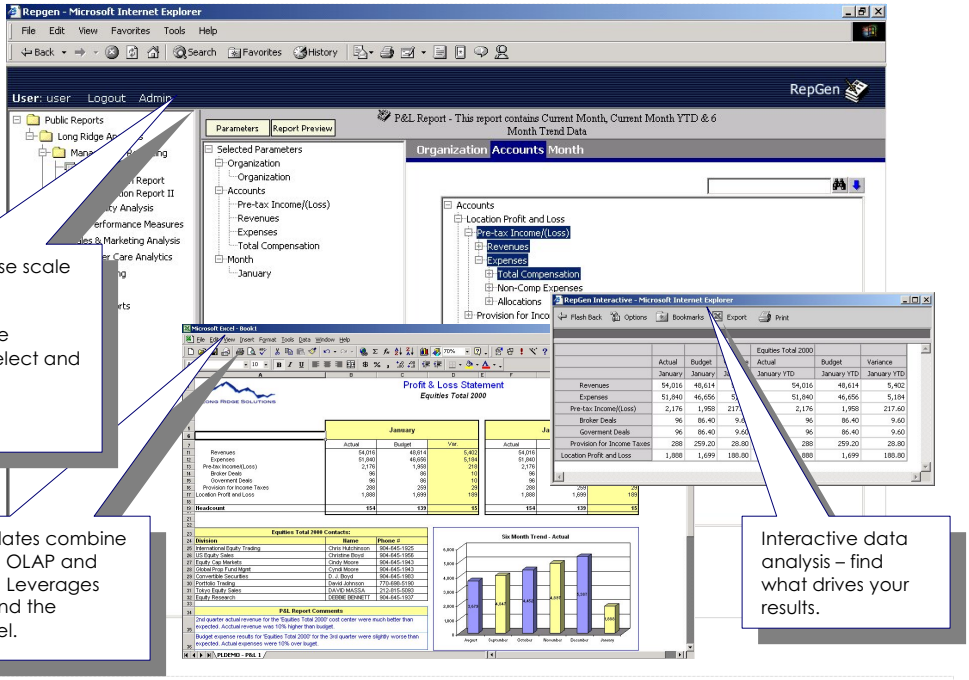
RepGen
Business Intelligence Tools for Creating Competitive Advantage



RepGen - Business Intelligence Tools

Long Ridge's RepGen provides browser-based, enterprise-wide reporting and analysis on all aspects of your business. Easily tailored to your specific needs, our business intelligence solutions leverage all types of data stores, including relational and On-Line Analytic Processing (OLAP) solutions from Microsoft, Oracle, IBM and Hyperion. Business and financial users can review plan, actual, and forecast data directly over the Web, or print highly formatted reports and report books.

Report templates are designed in Microsoft Excel and accommodate tabular, graphical and textual data, from multiple sources. Report templates can be organized for enterprise, individual or departmental use, providing common views of your company, parameterized for each individual user.

- Integrates data from multiple sources (e.g. spreadsheets, mainframes, relational databases, data warehouses, and OLAP platforms like Microsoft Analysis Services and Hyperion Essbase).
- Allows for tactical pricing, sales and marketing, and resource allocation decisions.
- Improves analysis of company-wide profitability.
- Delivered in Excel for easy manipulation and distribution.
- Accommodates tabular, graphical, and textual data.
- Provides enterprise, individual or selectively shared usage.
- Allows drill down and pivoting of row and column headings to understand underlying report details.
- Saves time and effort by making data analysis instantly accessible to decision makers so they can manage their businesses effectively.
